

Kavach

Two-minute demo video script

Record the citizen journey first.

Use the second minute to explain the product, the build, and the boundary between a working prototype and real public systems.

0:00-1:00	1:00-2:00
Citizen demo	Product and build explanation
Upload evidence, review fields, preview the financial path, and show the document outputs.	Explain the research, the social branch, the stack, Codex, and the honest limits.

Core message: Kavach turns the evidence already on a victim's phone into understandable next actions. 1930 and the real authorities stay in the loop.

Before recording

Use synthetic data only. Have a synthetic payment screenshot ready. Record in a phone-sized browser view if possible. Keep the 1930 link visible. Say demo or simulated whenever you show a bank, platform, police, or legal handoff.

Target delivery: 135-150 words per minute, with natural pauses while the screen changes. Approximate spoken narration: 300 words.

Prepared for the Build What Moves India submission. Research snapshot: 28 August 2026.

Show the complete journey

Use a synthetic financial screenshot for the main demo. The goal is to make the experience feel immediate, then prove that every result is clearly labelled as a prototype.

TIME	ON SCREEN	SAY
0:00-0:10	Show Kavach home. Keep the 1930 link visible.	When money leaves your account, every minute matters. The official first step is to call 1930 and your bank. Kavach helps prepare the facts quickly.
0:10-0:20	Tap Continue as reviewer, then Report a complaint.	I tap Continue as reviewer because this is a synthetic prototype, then open Report a complaint.
0:20-0:32	Choose I lost money. Upload a synthetic UPI receipt.	I choose I lost money and upload a synthetic UPI receipt. Kavach reads it in the browser with Tesseract.js. The screenshot is not sent to a paid vision API.
0:32-0:44	Show the Check screen. Edit one field if needed.	The Check screen shows visible amounts, UTR, UPI ID, and bank hints. I can correct every field. If OCR misses the UTR, it stays blank until I enter it from the SMS.
0:44-0:54	Continue to the labelled demo freeze notice.	Next, Kavach prepares a clearly labelled demo dual-bank request. The real bank call and 1930 report stay outside the prototype.
0:54-1:00	Show Track, then open the petition and receipt previews.	I open Track for an illustrative fund trail, then preview the petition and receipt. They are demo documents, not filings.

Visual note: If OCR misses a field, leave it blank briefly and edit it from the synthetic SMS. That moment demonstrates product honesty and the human Check step.

Explain why this is better

Keep the explanation grounded in the user problem. Mention the existing system's value, then show the specific friction Kavach removes.

TIME	ON SCREEN	SAY
1:00-1:10	Show the evidence card or a simple text slide with 17.7%.	The problem is real. MoSPI's 2025 survey found that only 17.7% of people aged 15 and above said they could report cybercrime.
1:10-1:22	Show the NCRP comparison slide, then return to Kavach.	The NCRP is valuable and connected to the real 1930 and CFCFRMS response. But citizens still face separate doors for registration, tracking, suspect reporting, and a detailed checklist.
1:22-1:35	Show the evidence-first intake and editable Check step.	Kavach changes the starting point from a taxonomy test to the evidence already in the victim's phone. It adds a human Check step, manual fallbacks, bilingual copy, and voice input.
1:35-1:48	Briefly show the social branch or its tracker.	There are two complete branches. Financial cases show the simulated bank handoff and fund trail. Social cases show a Section 79 notice, a 36-hour demo window, escalation, and an FIR draft.
1:48-2:00	End on the prototype disclosure screen or end card.	The stack is React, TypeScript, Vite, Tailwind, Tesseract.js, Web Speech API, browser storage, and html2pdf. Codex helped scan the repository, shape the four-step journey, handle failure states, and keep every live-system claim honest. Kavach prepares the next action while 1930 and the authorities remain in the loop.

FACT TO SHOW	SOURCE
17.7% of people aged 15 and above reported being able to complain about cybercrime or report cyber fraud in MoSPI's 2025 survey. The figure was 12.7% for women and 22.7% for men.	MoSPI NSS Report No. 593, Comprehensive Modular Survey: Telecom 2025
MHA reports more than INR 4,725 crore saved for more than 14.47 lakh victims through CFCFRMS by 31 March 2025.	Ministry of Home Affairs Annual Report 2024-25

RECORDING GUIDE

Keep the demo precise

Use these checks before you export the video. They protect the submission's honesty score and keep the story easy to follow.

DO	AVOID
Show the real upload path with a synthetic screenshot.	Do not rely only on a preset persona.
Say: simulated freeze, illustrative fund trail, demo petition, and no notice sent.	Do not say that a bank froze money or a platform received a notice.
Keep 1930 visible and say it is the real emergency channel.	Do not imply that Kavach replaces 1930 or the official NCRP portal.
Show an editable or empty field if OCR misses something.	Do not invent a UTR or hide an OCR failure.
End on the prototype boundary disclosure.	Do not use government logos, seals, or language that suggests endorsement.

Kavach
From screenshot to next action
Call 1930 for real financial fraud
Independent prototype. Not an official government service.
